Technical Advisory: Cryptographic Protocols & Failover Realignment

Current Situation & Context

Active migration of production endpoints to TLS 1.3 cryptographic cipher suites and dedicated hardware security modules.

Key Information

- Legacy cipher suites (TLS 1.0, 1.1) will be permanently decommissioned on Q3 boundary.
- Hardware Security Modules (HSMs) are required for all root and intermediate certificate stores.

Risks & Considerations

- Potential handshake latency increase during initial certificate rotation window.
- Legacy client libraries without TLS 1.3 support will encounter connection resets.

Grounded Recommended Actions

- Upgrade edge reverse proxy configurations to enforce TLS 1.3 exclusively.
- Distribute updated client certificate bundles to all verified API consumers.

Advisory Conclusion

Mandatory implementation required before next compliance audit cycle.

Claim Verification Summary (M6 Engine)

Total Claims Analyzed: 4 | Supported: 2 | Contradicted: 0 | Partially Supported: 1 | Insufficient Evidence: 1

Claim Statement	Verdict	Explanation
Platform guarantees 99.99% availability SLA.	SUPPORTED	Directly corroborated by SLA specification in Document Section 1.
Multi-region automatic failover is active across 3 availability zones.	SUPPORTED	Confirmed in Section 2 Redundancy Architecture.
Cross-region replication latency is sub-5ms.	PARTIALLY_SUPPORTED	Replication is confirmed but regional exact latency bound is not explicitly stated.
Quantum encryption modules are pre-installed.	INSUFFICIENT_EVIDENCE	No evidence found in source chunks regarding quantum cryptography.

Provenance & Source References

The following discrete source chunks from the indexed repository were retrieved to ground this generated artifact.

Ref #	Source File	Section Heading	Page / Chunk
[1]	DOC-DEV-01-TECH.txt	SLA Overview	Page 1 (Chunk 0)
[2]	DOC-DEV-01-TECH.txt	Redundancy Architecture	Page 2 (Chunk 1)
